INSTALLATION INSTRUCTIONS

Firestone

*World's Number 1
Air Spring.*

FIRESTONE INDUSTRIAL PRODUCTS COMPANY

! IMPORTANT

PLEASE DON'T HURT YOURSELF, YOUR KIT OR YOUR VEHICLE. TAKE A MINUTE TO READ THIS IMPORTANT INFORMATION.

DO NOT INSTALL IF THE TRUCK HAS BEEN LIFTED AND THE STOCK JOUNCE BUMPER SPACERS ARE NOT ON THE VEHICLE. *This kit is to be used on a **pickup truck only**, and **DOES NOT INCREASE YOUR VEHICLE'S MAXIMUM LOAD.***

SAFE INSTALLATION

Please take all safety precautions during installation. A hydraulic jack can fail, and if that happens, you can be seriously hurt, or worse, if you are relying on it to hold up the vehicle. If you use a hydraulic jack, secure jack stands in the appropriate locations and chock any tires still touching the ground.

Wear safety glasses or goggles. Your eyes may be lower than some parts and pieces, and you don't want to lose an eye.

Remove the possibility of any electrical issues by disconnecting the negative battery cable.

KIT CLEARANCE

There must be a minimum of 1/2" clearance around all installed components when the Air Springs are inflated and under a load. The Air Springs must flex and expand during operation, so the clearance keeps the kit from rubbing against parts of the vehicle.

VEHICLE GVWR

NEVER exceed the maximum load recommended by the vehicle manufacturer (GVWR). The GVWR can be found in your vehicle's owner's manual or on the data plate on the driver's side door.

INFLATING THE AIR SPRINGS

When inflating Air Springs, add air pressure in small quantities, checking air pressure frequently. The Air Springs have much less air volume than a tire, so they inflate much more quickly.

PRESSURE TO LOAD

The Air Springs will support approximately 50 lbs. of load for each PSI of inflation pressure (per pair). For example, 50 PSI of inflation pressure will support a load of 2500 lbs. per pair of Air Springs.

APPROPRIATE AIR PRESSURE

For best ride, use only enough air pressure in the Air Springs to level the vehicle when viewed from the side (front to rear). This will vary, depending on the load, location of the load, condition of the existing suspension, and personal preference.

OPTIONAL T-FITTING

This kit includes Inflation Valves and Air Line Tube for each Air Spring, allowing you to compensate for unbalanced loads. If you prefer a single Inflation Valve system to provide equal pressure to both Air Springs, your dealer can supply the optional "T" fitting (Part # 3025 or WRI-760-3461 retail pack).

ONCE INSTALLED SUCCESSFULLY, FOLLOW THESE PRESSURE REQUIREMENTS FOR THE AIR SPRINGS:

MINIMUM PRESSURE

MAXIMUM PRESSURE (LOADED)

PARTS

Compare the parts below to your kit. Assure you have all pieces, and organize them for an easier installation.

MAIN KIT CONTENTS

PART # 7701	 x2 AIR SPRING	PART # 5809	 x1 LEFT LOWER BRACKET	PART # 5477	 x2 1/2" SPACER
PART # 5717	 x1 LEFT SIDE UPPER BRACKET	PART # 5810	 x1 RIGHT LOWER BRACKET	PART # 1004	 x1 HEAT SHIELD
PART # 5572	 x1 RIGHT SIDE UPPER BRACKET	PART # 5613	 x2 AXLE STRAP BRACKET	PART # 9415	 x1 AIR LINE TUBE (22 FEET)

A24-760-7560 INFLATION VALVE BRACKET KIT

PART # 9483	 x1 NO-DRILL INFLATION VALVE BRACKET	PART # 9488	 x2 LARGE NYLON TIE
-------------	---	-------------	---

A21-760-2583 HARDWARE PACK

PT # 3029	 x1 3/8" - 16 x 1 1/2" HEX HEAD BOLT	PT # 3067	 x7 3/8" - 16 FLANGE LOCK NUT	PT # 3296	 x1 3/4" LOCK WASHER
PT # 0071	 x1 3/8" FLAT WASHER	PT # 0632	 x2 3/8" LARGE FLAT WASHER	PT # 3032	 x2 INFLATION VALVE AND VALVE CAP ASSEMBLY
PT # 3033	 x4 5/16" FLAT WASHER	PT # 3409	 x1 3/4" - 16 x 1 1/4" HEX HEAD BOLT	PT # 3046	 x2 AIR FITTING
PT # 3411	 x1 3/4" THICK WASHER	PT # 3295	 x2 3/4" - 16 HEX NUT	PT # 3428	 x4 3/8" - 16 x 9" CARRIAGE BOLT
PT # 0681	 x4 3/8" - 16 x 3/4" HEX HEAD BOLT	PT # 3412	 x1 3/4" - 16 FRAME NUT	PT # 9036	 x6 RED NYLON TIE
PT # 3345	 x2 3/8" - 16 x 2 1/2" FLAT HEAD BOLT	PT # 3064	 x2 INTERNAL TOOTH LOCK WASHER	PT # 0899	 x2 THERMAL SLEEVE

CONTENTS AND OVERVIEW

PAGE **4** REMOVE JOUNCE BUMPER & INSTALL UPPER BRACKET

PAGE **5** FASTEN AIR SPRING TO UPPER BRACKET

PAGE **6** INSTALL LOWER BRACKET

PAGE **7** SECURE LOWER BRACKET

PAGE **8** INSTALL RIGHT SIDE UPPER BRACKET

PAGE **9** HEAT SHIELD & RIGHT SIDE

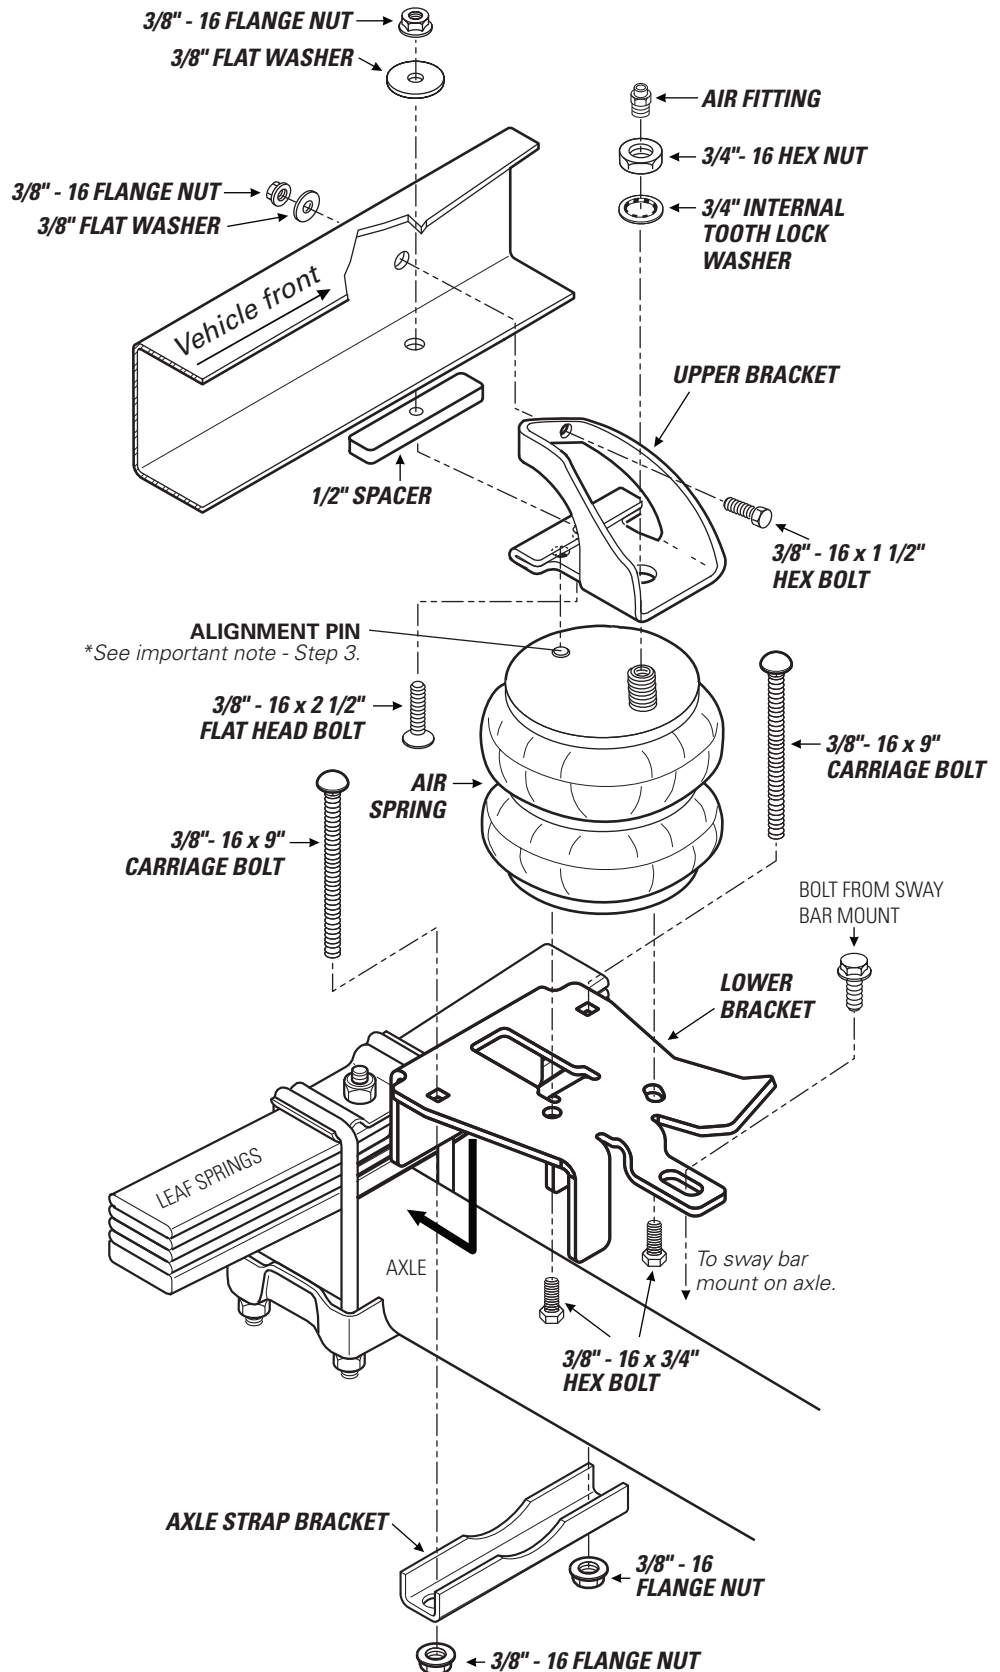

PAGE **10** AIR LINE TUBE & INFLATION VALVE INSTALLATION

PAGE **11** INSTALL & ROUTE AIR LINE TUBE

PAGE **12** CHECKING THE SYSTEM

PAGE **13** FIXING AN AIR LEAK

PAGE **14** FINISHING THE INSTALLATION

REMOVE EXISTING JOUNCE BUMPER

1

INSTALL LEFT SIDE UPPER BRACKET

2

ASSURE NO WIRING OR LINES ARE PINCHED BETWEEN THE BRACKET AND FRAME.

3

FASTEN AIR SPRING TO UPPER BRACKET

INSTALLING THE RIGHT SIDE? REMEMBER TO INSTALL THE HEAT SHIELD IN STEP 7 FIRST!

VIEW FROM BELOW

ALIGNMENT PIN ON AIR SPRINGS MUST BE INSTALLED TO FULLY SEAT INTO THE FRONT ALIGNMENT HOLE IN THE UPPER BRACKET. FAILURE TO DO SO WILL CAUSE IT TO BE PUSHED INTO THE BEAD PLATE, CREATING AN AIR LEAK, AND RESULTING IN AN AIR SPRING FAILURE THAT IS **NOT WARRANTABLE. THE ALIGNMENT PIN CANNOT HOLD 2,500 LBS! IT IS USED FOR ALIGNMENT ONLY!**

1 Remove the existing Sway Bar bolt from the mount. **KEEP THIS BOLT.**

2 Fasten the Lower Bracket to the Air Spring as shown. Hand-tighten for now.

3 Set the Lower Bracket into position on the axle, as close to the leaf spring stack as possible. Assure the tab on the Lower Bracket can be fastened to the sway bar mount with the existing bolt.

4 Dry fit the assembly and make alignment marks, as shown.

5 Align the alignment marks and securely fasten the Lower Bracket to the Air Spring. Use the existing sway bar mount bolt to fasten the tab on the Lower Bracket to the sway bar.

5

SECURE LOWER BRACKET

USE YOUR HAND TO CHECK FOR THE PROPER CLEARANCE AROUND THE AIR SPRING. IF YOUR HAND DOES NOT FIT BETWEEN THE AIR SPRING AND OTHER COMPONENTS, IT WILL RUB!

Alternate tightening to draw Axle Strap Bracket evenly to the axle.

AWESOME! You're done with the left side. Move on to Step 6 to begin the right side installation.

1 Follow the steps below to install the right side Upper Bracket.

2 Once completed, see Step 7 for Heat Shield Installation.

3 Once Step 7 is complete for the right side, continue to Steps 3-5.

ASSURE NO WIRING OR LINES ARE PINCHED BETWEEN THE BRACKET AND FRAME.

7

INSTALL RIGHT SIDE WITH HEAT SHIELD

RIGHT SIDE INSTALLATION MUST INCLUDE HEAT SHIELD!

HEAT SHIELD →

AIR SPRING →

HEAT SHIELD →

Position Heat Shield to
closest point of exhaust.
DO NOT PLACE
DIRECTLY ABOVE AXLE.

IF USING THE OPTIONAL NO-DRILL INFLATION VALVE BRACKET, CHOOSE OPTION 1. IF DRILLING, CHOOSE OPTION 2. **INFLATION VALVES MUST BE ACCESSIBLE BY AN AIR CHUCK.**

1 Secure the Air Inflation Valve Bracket to a protected, secure location. **PROCEED TO STEP 3.**

2 Select a protected location to install the Inflation Valves, such as the bumper or the body of the vehicle.

Drill two 5/16" holes for Inflation Valve install locations.

3 Install Inflation Valve assembly as shown.

1 Match Air Line Tube ends.

2 Find center of Air Line Tube, make a square cut with tube cutter or sharp utility knife.

DO

Make sure the cut is as square as possible. Use a tube cutter or sharp utility knife.

DON'T

Fold or kink the Air Line Tube. Cut the Air Line Tube at an angle. Use pliers, scissors, snips, saws, or side cutters.

PROPER AND IMPROPER CUTS IN THE AIR LINE TUBE

10

INSTALLING AIR LINE TUBE INTO AIR FITTINGS AND INFLATION VALVE

1 Insert end of Air Line Tube into Air Fitting.

2 Push Air Line Tube into Air Fitting as far as possible.

3 Gently pull on the Air Line Tube to check for a secure fit.

4 To remove, push down collar and gently pull Air Line Tube away.

Removal Tip: Use a 1/4", 5/16", or 6mm open-ended wrench to push the collar down.

11

ROUTE AND SECURE AIR LINE TUBES

Air Line Tube routes will vary, depending on your truck, and requires you to choose the best path from the Air Springs to the Inflation Valves. Use the instructions below to help you choose.

DO

Select routes protected from heat, debris, and sharp edges.
Use Thermal Shields near heat sources.
Use Nylon Ties to secure the Air Line Tube.

DON'T

Bend or sharply curve Air Line Tubes.
Leave Air Line Tube exposed to sharp edges.
Use unnecessary lengths of Air Line Tube.
Route Air Line Tube near moving parts.
Let Air Line tube hang unsecured from vehicle.
Scar Air Line Tube while routing.

AIR LINE TUBE **THERMAL SHIELD**

USE SUPPLIED THERMAL SHIELDS WHEN AIR LINE TUBE RUNS **WITHIN 6 INCHES** OF HEAT SOURCES.

- 1** Place an air chuck onto the Inflation Valve and fill the system to **70 PSI**.

AIR SPRINGS INFLATE QUICKLY. CHECK AIR PRESSURE WHILE INFLATING.

- 2** Spray fittings with soap and water mixture.

- 3** Observe bubbles.

**SMALL SOAP BUBBLES
THAT DO NOT EXPAND**

**SOAP BUBBLES
THAT EXPAND**

NO LEAKS?

Congratulations! Continue to Step 14 to finish installation. Review the Operating Instructions.

LEAK?

Bummer. Continue to Step 13 to fix the leak.

- 1** Press the air valve on end of Inflation Valve to release all air pressure.

AIR VALVE

EXHAUST ALL AIR FROM THE SYSTEM PRIOR TO RELEASING AIR LINE TUBES FROM AIR FITTINGS.

LEAK AT AIR LINE TUBE AND AIR FITTING

Release Air Line Tube (see page 11). Review proper cuts and procedures in Step 9. Repeat Steps 10 and 12.

LEAK AT BASE OF AIR FITTING ON AIR SPRING

Tighten Air Fitting one turn or until leak stops.

LEAK OUT OF THE VALVE CORE ON INFLATION VALVE

Tighten valve core with valve core wrench on Inflation Valve Cap.

STILL HAVE A LEAK?

Refer to the Troubleshooting section of the Instruction Manual. If the leak persists, or if there is an issue with a leaking part, call 1-800-888-0650; Option 1; Option 1 for Tech Support.

SAFELY RETURN VEHICLE TO OPERATIVE STATE

If you removed any wheels during installation, install the wheels and torque the lug nuts to the manufacturer's specifications.

Safely remove any jack stands and wheel chocks used during installation.

Re-attach the negative battery cable.

DOUBLE-CHECK AIR SPRING CLEARANCE

Check the Air Springs once again for the proper 1/2" minimum clearance. Perform clearance check again when vehicle is under load.

VEHICLE GVWR

NEVER exceed the maximum load recommended by the vehicle manufacturer (GVWR). The GVWR can be found in your vehicle's owner's manual or on the data plate on the driver's side door. Consult your local dealership for additional GVWR specifications.

READ AND UNDERSTAND THE OPERATING INSTRUCTIONS

The Ride-Rite system can improve handling and comfort. Take the time to learn how to properly use and maintain your investment by reading the Operating Instructions.

USE YOUR HAND TO CHECK FOR THE PROPER CLEARANCE AROUND THE AIR SPRING. IF YOUR HAND DOES NOT FIT BETWEEN THE AIR SPRING AND OTHER COMPONENTS, IT WILL RUB!

! IMPORTANT

A MINIMUM OF 5 PSI MUST BE MAINTAINED IN THE AIR SPRINGS AT ALL TIMES

Too much air pressure in the Air Springs will result in a firmer ride, while too little air pressure will allow the Air Springs to bottom out over rough conditions, and will not provide the improvement in handling that is possible.

MINIMUM PRESSURE

MAXIMUM PRESSURE (LOADED)

riderite.com

BEFORE YOU DRIVE, CONFIRM THE FOLLOWING:

- Do you have a minimum of 5PSI in your Air Springs?
- Are your Air Springs standing 7" - 8" tall? 7" - 8"
- Are your Air Springs properly aligned, left-to-right and front-to-back?
- Are your nuts and bolts tight?
- Put your paper work back into the sleeve and keep it in your glove compartment for future reference.
- You've been bagged...and now your suspension is Airide™ equipped! Show it off with the supplied decal!
